

Specto is an **intelligent forms processing system** that **augments** the processing of paper and digital based documents. The system extracts and classifies data from incoming documents and applies the output to downstream systems and workflows. Using Artificial Intelligence (A.I.), Machine Learning, and OCR technologies Specto **integrates smoothly into your workflow**.

## The Problem

-  Reviewing a high volume of paper and digital documents
-  High rate of errors associated with the manual review of paper and digital documents
-  Manually classifying paper and digital based documents
-  Entering data from paper and digital forms into enterprise systems
-  Dedicating resources, time, and money to manually process documents

## How it Works

## Key Benefits

-  Frees up resources to focus on mission critical tasks
-  Improves the speed and time of processing paper and digital documents
-  Reduces the error rate associated with manual review
-  Increases human productivity by improving data quality
-  Improves the customer experience and retention rates
